

ADDICTION PSYCHIATRY FELLOWSHIPS

- 2007 - 2009 -

FROM THE CENTER FOR MEDICAL FELLOWSHIPS
IN ALCOHOLISM AND DRUG ABUSE,
at New York University.

The Center is sponsored by the American Academy of Addiction Psychiatry (AAAP), the Association for Medical Education and Research in Substance Abuse (AMERSA), and the American Society of Addiction Medicine (ASAM). The information in this brochure is also available at www.med.nyu.edu/substanceabuse. Support for this project was provided by the Rose M. Badgeley Residuary Charitable Trust and the Center for Living.

This brochure was prepared by the Center for Medical Fellowships in Alcoholism and Drug Abuse at NYU, directed by Marc Galanter, MD, Director of the Center, Department of Psychiatry, NYU School of Medicine, 550 First Avenue, New York, NY 10016. The information was that which was obtained from ACGME, medical literature, and program responses.

An electronic copy of the contents of this brochure is available at the Center's website at www.med.nyu.edu/substanceabuse.

PGY-5,6 RESIDENCIES IN ADDICTION: THEIR NEED AND THEIR EVOLUTION

The Issue

The magnitude of the alcohol and drug abuse problem today is well documented, with the cost to the public calculated at over \$414 billion per year in health care and lost work. In general medical facilities alone, on average 25% of the patients present with such problems, many of which go undiagnosed. When the sequelae of addiction, such as cirrhosis, trauma, and infection present, they may receive proper medical attention. On the other hand, patients' primary addictive problems go untreated. Furthermore, the rate of substance abuse among general psychiatric patients without primary addictive disorders has been found to be 25% to 60%, depending on the region and the clinical setting. Despite this, medical education has been seriously lacking in the addictions until recently. For example, training in this area was not formally required in psychiatric residencies until 1985, and is only recently required in internal medicine.

Federal Efforts

Clearly we need to assure greater medical sophistication in substance abuse. Where, however, do we stand in developing the needed teaching faculty and specialists in the field? In 1972, the federal government initiated a program of 3-year grants for Career Teachers in Alcoholism and Drug Abuse. In 1981, after only one grantee had been funded in each of 55 of the 124 eligible schools, the program was terminated. Subsequently, modest grants have addressed curriculum development, but have not provided meaningful support for training positions. Recent federal faculty development awards and Project Mainstream have provided partial support for training faculty, but none for residents or medical fellows.

A comparison of these developments with those that took place in other medical subspecialties is compelling. For decades, federal funding for fellows in subspecialties, from cardiology to child psychiatry, served as the basis for developing expert practitioners and teaching faculty. No such support was developed for training physicians in the alcoholism and drug abuse field, thereby necessitating new conceptions for how to underwrite such programs. Such programs often come from clinical staff lines and research training dollars. Constraints imposed by managed care, however, have compromised clinical training overall. The problem is a substantial one, since post-residency salaries in practice situations are two to three times those of PGY 5 positions.

Specialty Recognition

The legitimacy of medical subspecialties and their ability to establish standards of training and attract trainees has traditionally rested on various forms of the board certification process, through the American Board of Medical Specialties (ABMS). Virtually all graduates from American medical schools achieve certification through an ABMS member board by means of postgraduate training and exam.

In order to attract qualified young physicians, the substance abuse field moved toward implementing an educational format that parallels those accepted in medicine broadly. Since 1986, the American Society of Addiction Medicine has given a certifying exam in addiction to physicians of all specialties. However, this certification is not recognized by the ABMS.

The established option for such training is now subspecialty certification. This current procedure of the ABMS entails modification of specialty certification to reflect that a candidate has completed at least one year of full-time formal training in a subspecialty program and has passed an additional examination prepared by a member of the Board. Geriatric medicine was the first such program to be established format of added qualifications, in 1987. The certification process can be initiated by component boards of the ABMS in order to institutionalize post-residency training in addiction and promote development of a cadre of physicians who will serve as medical academics and practitioners for the field.

The American Board of Psychiatry and Neurology established subspecialty certification in addiction psychiatry, primarily in response to supportive information provided by the American Academy of Addiction Psychiatry. The first examination was given in March 1993. Through 1998 board certified psychiatrists with clinical experience in addiction could sit for the subspecialty exam. Completion of training in an ACGME accredited PGY-V addiction psychiatry residency is now required. Between 1995 and 2005 1,118 certificates were issued to successful examinees. In the most recent year, however, only an average of 20 certificates have been issued annually because the option of applying for certification without a completed fellowship year no longer applies.

The Accreditation Council for Graduate Medical Education

The ACGME is sponsored by the American Board of Medical Specialties, the American Hospital Association, the American Medical Association, the Association of

American Medical Colleges, and the Council of Medical Specialty Societies. Its purpose is to establish standards and accredit graduate medical education training programs, residencies, and fellowships nationwide. The ACGME also approves additional training beyond the basic residency, often called fellowship training. In 1995, the ACGME approved the first Addiction Psychiatry residencies. At present, the ACGME has established standards and is accrediting training programs in Addiction Psychiatry for one or two years following completion of a basic psychiatry residency. Training in an accredited addiction psychiatry residence is now required in order to qualify for taking the examination for Subspecialty Certification in Addiction Psychiatry. At present there are 40 programs accepting residents which have already been approved through the ACGME accreditation process and they are designated in the ensuing text (two approved programs were no longer accepting residents). Further information on additional programs approved subsequently is available through the ACGME at (312) 464-4920. With the establishment of this process, formal approval under the U.S. mainstream organization for medical training has been achieved in addiction psychiatry. ACGME Program requirements for accredited addiction psychiatry residencies are available at <http://www.acgme.org> Residency Review Committees, Psychiatry, program requirements.

Although there are positions for non-psychiatrists in conjunction with some of the approved programs, and although fellowships in addiction have been organized for non-psychiatrists in other specialties, an ACGME accredited process for postgraduate addiction training of non-psychiatric physicians remains to be established. Such a system would be helpful in formalizing the role of addiction training for non-psychiatrist physicians. Efforts are being made in this direction. Furthermore, Addiction Medicine has been given a place on the roster of specialty areas within the American Medical Association.

Residency Requirements

Both psychiatry and internal medicine now require training in addiction in their respective residency training programs. Psychiatry has now instituted a formal one-month full-time equivalent requirement in its postgraduate medical sequence.

PROGRAM REQUIREMENTS FOR RESIDENCY EDUCATION IN ADDICTION PSYCHIATRY

Curriculum Content

1. Residents must acquire knowledge and skills in the following areas:
 - a. Knowledge of the signs and symptoms of the use and abuse of all of the major categories of substances enumerated in VA.2.a-g, as well as knowledge of the types of treatment required for each.
 - b. Knowledge of the signs of withdrawal from these major categories of substances, knowledge and experience with the range of options for treatment of the withdrawal syndromes, and the complications commonly associated with such withdrawal.
 - c. Knowledge of the signs and symptoms of overdose, the medical and psychiatric sequelae of overdose, and experience in providing proper treatment of overdose.
 - d. Management of detoxification: Inpatient management of Substance-related Disorders. Experience in working collaboratively with specialists in the emergency department and intensive care units in the diagnosis and management of acute overdose symptoms.
 - e. Knowledge of the signs and symptoms of the social and psychological problems as well as the medical and psychiatric disorders which often accompany the chronic use and abuse of the major categories of substances.
 - f. Experience in the use of psychoactive medications in the treatment of psychiatric disorders often accompanying the major categories of Substance-related Disorders.
 - g. Experience in the use of techniques required for confrontation of and intervention with a chronic substance abuser, and in dealing with the defense mechanisms that cause the patient to resist entry into treatment.
 - h. Experience in the use of the various psychotherapeutic modalities involved in the ongoing management of the chronic substance abusing patient, including

family therapy, group therapy, motivational enhancement therapy, and relapse prevention therapy.

- i. Experience in working collaboratively with other mental health providers and allied health professionals, including nurses, social workers, psychologists, nurse practitioners, counselors, pharmacists, and others who participate in the care of patients with Substance-related Disorders.
- j. Knowledge and understanding of the special problems of the pregnant woman with Substance-related Disorders and of the babies born to these women.
- k. Knowledge of family systems and dynamics relevant to the etiology, diagnosis, and treatment of Substance-related Disorders.
- l. Knowledge of the genetic vulnerabilities, risk and protective factors, epidemiology, and prevention of Substance-related Disorders.
- m. Familiarity with the major medical journals and professional-scientific organizations dealing with research on the understanding and treatment of Substance-related Disorders.
- n. Critical analysis of research reports, as presented in journal clubs and seminars.
- o. Experience in teaching and supervising clinical trainees in the care of Substance-related Disorders.
- p. Understanding of the current economic aspects of providing psychiatric and other healthcare services to the addicted patient.
- q. Knowledge of quality assurance measures and cost effectiveness of various treatment modalities for Substance-related Disorders.

2. Conferences

Conferences in addiction psychiatry, such as ground rounds, case conferences, reading seminars, and journal clubs, should be specifically designed to complement the clinical experiences. Regular attendance by residents and faculty should be documented.

Clinical Experiences

The number and variety of new and follow-up patients spanning the life cycle from adolescent to old age must be sufficient to ensure an adequate outpatient and inpatient experience as specified in 1.C.2. The spectrum of patients should include diverse socioeconomic, education, and cultural backgrounds.

The training program must include the following clinical components:

1. Evaluation, consultation, and treatment of:
 - a. Patients with primary Substance-related Disorders and their families.
 - b. Medical and surgical patients in the emergency department, intensive care units, and general wards of the hospital with acute and chronic Substance-related Disorders, including acute intoxication and overdose.
 - c. Psychiatric inpatients and outpatients with chemical dependencies and comorbid psychopathology, to include a broad range of psychiatric diagnoses, such as affective disorders, psychotic disorders, organic disorders, personality disorders, and anxiety disorders, as well as patients suffering from medical conditions commonly associated with Substance-related Disorders such as hepatitis and HIV/AIDS.
 - d. Medication-dependent patients with chronic medical disorders/conditions (such as patients with chronic pain).
2. Exposure to patients with Substance-related Disorders related to the following substances:
 - a. alcohol
 - b. opioids
 - c. cocaine and other stimulants
 - d. marijuana and hallucinogens
 - e. benzodiazepines
 - f. other substances of abuse, including sedatives, hypnotics or anxiolytics
 - g. miscellaneous/unusual, e.g., nutmeg, designer drugs, organic solvents/inhalants.
3. Treatment by the resident of a minimum of five addicted outpatients with a variety of diagnoses requiring individual treatment for at least six months.
4. Rotations should provide residents with experience in evaluating acute and

chronic patients in inpatient and outpatient settings. There should be an identifiable structured educational experience in neuropsychiatry relevant to the practice of addiction psychiatry that includes both didactic and clinical training methods. The curriculum should emphasize functional assessment, signs and symptoms of neuropsychiatric impairment associated with Substance-related Disorders, and the identification of physical illnesses and iatrogenic factors that can alter mental status, and behavior.

5. The program must provide specific experience in consultation to acute and chronic, medically ill patients with Substance-related Disorders who are being treated on emergency, intensive care, medical and/or surgical services of a general hospital. Supervision of addiction psychiatry residents in their clinical evaluation of such patients, as well as in their consultative role, is essential. The program should provide residents with the opportunity to function at the level of a specialist consultant to primary care physicians and to intensive care specialists.
6. Experience in working with multidisciplinary teams as a consultant and as a team leader, including the integration of recommendations and decisions from consulting medical specialists and other professionals in related health disciplines.
7. Experience in working with patients who are participating in self-help programs.
8. Experience with opiate replacement therapy.

CENTER FOR MEDICAL FELLOWSHIPS IN ALCOHOLISM AND DRUG ABUSE

The Center for Medical Fellowships in Alcoholism and Drug Abuse was established in 1987. It is sponsored by the American Academy of Addiction Psychiatry and the Association for Medical Education and Research in Substance Abuse, and the American Society of Addiction Medicine to promote postgraduate medical training in the addictions. This goal is carried out by: (1) establishing training standards for medical training in the addictions, (2) disseminating information on existing postgraduate programs, and (3) promoting the establishment of new programs in qualified medical training centers. The Center draws on the expertise of its advisory group, leaders in education of medical specialists in alcohol and drug abuse. For further information write to the Center at the Division of Alcoholism and Drug Abuse, NB20N28, Department of Psychiatry, NYU School of Medicine, 550 First Avenue, New York, NY, 10016, or at our website www.med.nyu.edu/substanceabuse. The Division is a collaborating center of the Programme in Substance Abuse of the World Health Organization.

The following National Advisory Committee of the Center for Medical Fellowships in Alcoholism and Drug Abuse was originally established in 1989 to determine the guidelines for training of fellows and to enhance collaboration among training programs. Their efforts were central to initial formulation of addiction training. They and their schools were: John Chappel, MD (Nevada), Paul Cushman, MD (SUNY), Richard J. Frances, MD (UMDNJ), Marc Galanter, MD (NYU Chair), Enoch Gordis, MD (NIAAA), James A. Halikas, MD (Minnesota), Edward Kaufman, MD (California, Irvine), Herbert D. Kleber, MD (Yale), Mary Jeanne Kreek, M.D (Rockefeller), David C. Lewis, MD (Brown), Roger E. Meyer, MD (Connecticut), Sheldon Miller, M.D (Northwestern), Robert B. Millman, MD (Cornell), Robert M. Morse, MD (Mayo), Charles O'Brien, MD (Pennsylvania); Carolyn Robinowitz, MD (American Psychiatric Association), Sidney Schnoll, MD, PhD (Medical College of Virginia), Mark Schuckit, MD (University of California, San Diego), Barry Stimmel, MD (Mt. Sinai) Zebulon Taintor, MD (NYU), David Van Thiel, MD (Pittsburgh), Joseph Westermeyer, MD (Minnesota), Joel Yager, MD (UCLA)

The Center's Sponsoring Organizations

The American Academy of Addiction Psychiatry was established in 1985 in order to accumulate and share pertinent information concerning the delivery of health care services by providers in the field of addiction treatment; to stimulate and encourage

scientific and medical research of alternative methods of addiction treatment and its etiology; to develop standards of professional practice in the field of addiction; to disseminate and publish information in the field of addiction treatment for members of the profession and the public-at-large; to develop and maintain a liaison with organizations and government authorities in areas of common concerns and interest; and to educate and inform the public about the role of psychiatry and psychiatrists in the care of patients with a diagnosis of alcoholism and addictions. For further information: AAAP at www.aaap.org, 345 Blackstone Boulevard, Providence, RI 02906.

The American Society of Addiction Medicine is a national/international organization of physicians interested in the diseases of alcoholism and other drug dependencies and in other problems associated with psychoactive drug use as they affect the public health, who wish to extend and disseminate knowledge in these fields, and to enlighten and inform medical and public opinion with regard to these problems. For further information: ASAM at www.asam.org, 4601 N. Park Avenue, Chevy Chase, MD 20815.

The Association for Medical Education and Research in Substance Abuse is a national organization of medical educators, clinical researchers and other health professionals in the field of alcohol and drug abuse that provides: (1) a scholarly interdisciplinary forum for the exchange of information on techniques and teaching, (2) a network of educators and researchers in the field of substance abuse, and (3) a national voice in support of academic programs in universities and professional schools for substance abuse education and research. For further information: AMERSA at www.amersa.org, Brown University Center for Alcohol and Addiction Studies, Box G, Providence, RI 02912.

The Research Society on Alcoholism is dedicated to promoting investigation into the cause and treatment of alcoholism, as well as to related educational activities. The Board of RSA resolved to support the establishment of standards for postgraduate medical training in alcoholism and drug abuse that would include research training. The RSA has endorsed the fellowship program described here in particular to support the development of residency training for subspecialty fellows in addictions. For further information: RSA at www.rsoa.org

SURVEY OF U.S. (PGY-5 AND 5-6) RESIDENCY PROGRAMS

In order to provide a basis for planning and coordination, The national Center for Medical Fellowships in Alcohol and Drug Abuse, in conjunction with The American Academy of Addiction Psychiatry surveyed programs in 2006. All programs and facilities approved by the ACGME were contacted and asked to complete a questionnaire on items related to the history of their programs, their current status, and activities of current and past fellows.

Current status of residency positions (for which responses were received):

Total number of positions reported available in 2006*	72
Total number reported enrolled at present*	59

Current status of residency pprograms:

Number of programs active in 2006	39
Number of these instituted since 2004.....	1
Programs active in 2004, but closed since then	5
Programs active in 2004, but now inactive.....	2

The earliest reported residency programs were established in 1978.

Duration of residencies:

Programs may be certified for one year or for two years (36 responded)

	<u>N</u>	<u>%</u>
12 Months	18	50
12-24 Months	17	47
24 Months	1	3

Fellows' activities:

Mean percent of fellows' time devoted to each of the following activities (N=33):

	<u>%</u>
Patient care	65
Research	10
Classroom/instructional time	12
Teaching others	8
Administration	5

*This information was provided by the 33 programs responding to these items

Programs in which fellows provide at least some patient care (N=33):

	<u>N</u>	<u>%</u>
Alcoholism Inpatient Program	31	94
Addiction (Non-Methadone) Outpatient Program	33	100
Drug Abuse Inpatient Program	28	85
Non-Methadone Drug Abuse Outpatient Program	28	85
Dual Diagnosis Program	28	85
Consultation Service	32	97
Methadone Clinic Program	30	91
Residential Therapeutic Community	14	42
General Medical Service	16	48
Community Prevention Services	7	21
OB-GYN	10	30
Primary Care: Medicine	7	21
Primary Care: Family Practice	5	15
Primary Care: Pediatrics	3	9
Child Psychiatry	12	36
Other	2	6

Psychiatry physicians and non-physicians accepted into program (N=36):

Non-psychiatrist physicians	12	33
Non-physician doctoral level clinicians	4	11

Funding of Salaries:

Average annual salary 2006: \$49,875

Categorical sources of fellows' salaries:

<u>Salary Source</u>	<u>Primary</u>	<u>Secondary</u>	<u>Minor</u>	<u>Not at all</u>	<u>Responded Positively</u>
Clinical	16 (59%)	4 (15%)	0	7 (26%)	27

For Profit	1 (05%)	2 (9.5%)	2 (9.5%)	16 (76%)	21
Local Govt.	7 (33%)	2 (9.5%)	2 (9.5%)	10 (48%)	22

A Review of the Fellowship (PGY-5) Experience

In 1987, 211 training directors in the U.S. were surveyed for information on fellowships in substance abuse at their respective institutions. Of the 131 (62%) who responded, 27 reported having fellowships, 33 indicated an interest in establishing fellowships, and 69 reported no interest at that time. Subsequent surveys were undertaken in a similar manner in 1990, 1992, 1994, 1996, and for the 1998-9 academic year.

Board Certification

The ABPN approved the option of Added Qualifications in Addiction Psychiatry to certify expertise beyond the core residency, with the first certifying examination given in 1993. This process now called subspecialty certification is sanctioned by the ABMS under its guidelines for establishing subspecialties. Certification in a subspecialty can be given by a Board on the basis of an examination and a minimum training experience of one year associated with an ACGME accredited residency. Recertification is required every ten years.

The Accreditation Council for Graduate Medical Education (ACGME) accredits the respective training programs, and completion of an accredited program is required before a candidate can sit for the Subspecialty Certification Examination. In 1995, the first PGY V and V-VI addiction psychiatry residencies were approved. The Accredited PGY programs are now listed in the Graduate Medical Education Directory. As of July 2006, 41 training programs were accredited in addiction psychiatry, of which two were not active. Interestingly, accredited programs that were operative in 1989 do not now differ from those more recently established in both the array of clinical experiences provided and in salaries or salary base. This, no doubt, reflects standardization provided by the ACGME accreditation process. The newer programs do, however, fill fewer resident spots, likely reflecting the time it takes for new programs to become established. Furthermore, the five programs not currently accredited likely include some in the process of preparation for accreditation. An average of 20 psychiatrists have been certified in each of the last several years.

⁺Closed since 2004

^{*}Inactive Status

On the following pages, the most current information provided by PGY 5 training directors is provided.

INSTITUTION: Albert Einstein College of Medicine
ADDRESS: Department of Psychiatry and Behavioral Sciences
1300 Morris Park Avenue, Belfer 403
Bronx, NY 10461
Program Director: Merrill Herman, MD, PhD **Phone:** (718) 430-3080
mherman@montefiore.org **Fax:** (718) 430-8987

MEDICAL SCHOOL AFFILIATION

Albert Einstein College of Medicine of Yeshiva University, Bronx, NY

Number of psychiatrist positions available 2006: 2 **Number enrolled at present:** 2
Duration of fellowship: 1 or 2 years

Clinical Experiences and Rotations

Rotate through Alcohol and Drug Abuse Inpatient Unit, which also serves MICA patients; work in a MICA Day Treatment Program, including a group therapy experience; perform substance abuse consultations on inpatient consultation and referral service, as well as working in Methadone Clinic; do ongoing MICA evaluations, psychopharmacologic management and psychotherapy with patients in that setting.

Research Experience

Exposed to opportunities in research with HIV, genetics, and other medication issues involving substance abuse treatment; opportunity to do literature review during fellowship.

Teaching Activities

Work with psychiatry residents rotating through some of the clinical services. Have opportunity to give a lecture and do a case presentation during the fellowship.

Administrative Experience

Work on CQI activities, and participate in team coordination activities of the program.

Principal Goal of Training Program

Produce well-rounded addiction psychiatry clinicians with ability to think in academic manner about addiction; prepared potentially for leadership positions in addiction, with teaching, administrative and research opportunities.

Faculty

Byram T. Karasu, MD; Rita Aszalos, MD; Thomas Betzler, MD; Brenda Chabon, PhD; Roy Cohen, MD; Merrill Herman, MD; Ira Marion, MD; John Osei-Tutu, MD; Elise Richman, MD; Susan Whitley, MD; Peter Tenore, MD; Varinder Rathore, MD; Julia Arnstein, MD

Distinctive Aspects of Program

Excellent and diverse clinical experience combined with engaging and collegial academic atmosphere; exposure to medical and psychiatric aspects of addictive disease.

Current Salary (or range): NA

INSTITUTION: Albert Einstein College of Medicine at Beth Israel

ADDRESS: Beth Israel Medical Center
First Avenue at 16th Street
8 Bernstein
New York, NY 10003

Program Director: Prameet Singh, MD **Phone:** (212) 420-2198
psingh@chpnet.org **Fax:** (212) 420-2181

Program Contact: Lucy Lo **Phone:** (212) 420-2376
llo@bethisrealny.org

MEDICAL SCHOOL AFFILIATION

Albert Einstein College of Medicine of Yeshiva University, Bronx, NY

Number of psychiatrist positions available 2006: 3 **Number enrolled at present:** 3

Duration of fellowship: 1 year

Clinical Experiences and Rotations

Broad range of experience with rotations in dual diagnosis inpatient unit; inpatient medical detox (C-L); 28 day inpatient rehab; outpatient drug treatment program; addiction psychiatry clinic; pain management, and methadone maintenance; individual and group psychotherapy.

Research Experience

Can work on individual project or join ongoing project. Areas of focus are factors enhancing retention in treatment; treatment of post-acute withdrawal syndromes; neuroimaging (Division of Biol. Psy.) and alternative agents for detoxification Motivational Enhancement Therapy.

Teaching Activities

Teaching of PGY-2 residents, both didactic and clinical supervision; teaching of medical students.

Administrative Experience

Triaging and managing referrals and requests for consultation from outpatient drug treatment programs.

Principal Goal of Training Program

To train clinically strong addiction psychiatrists who can impart these skills to others, using a broad range of treatment methods.

Faculty

Prameet Singh, MD; Martin Kron, MD; James Wolberg, MD; Randy Seewald, MD; Susan Tross, PhD; Ricardo Cruciani, MD

Distinctive Aspects of Program

Unmatched depth and range of clinical experience, given the gamut and size of treatment options delivered at Beth Israel Medical Center.

Current Salary (or range): \$59,000

INSTITUTION: Albert Einstein College of Medicine

ADDRESS: Bronx-Lebanon Hospital Center
1285 Fulton Avenue, 5th Floor
Bronx, NY10456

Program Director: John Osei-Tutu, MD
joseitut@bronxleb.org

Phone: (718) 901-6133

Fax: (718) 901-6356

MEDICAL SCHOOL AFFILIATION

Albert Einstein College of Medicine at Yeshiva University, Bronx, NY

Number of psychiatrist positions available 2006: 3 **Number enrolled at present:** 3

Duration of fellowship: 1 year

Clinical Experiences and Rotations

Supervised clinical rotations on methadone maintenance; outpatient chemical dependence rehabilitation and in-patient detox/rehabilitation; evaluate and treat addicted patients under supervision, including teaching rounds and weekly supervision; participate in case conference, journal clubs, grand rounds, teaching residents and medical students.

Research Experience

Teach methodology of research; participate in on-going projects, i.e. Promising Tobacco Intervention, Hepatitis C among opioid dependent patients, epidemiologic studies with chemical dependence units, and suboxone use in drug free outpatient program.

Teaching Activities

Teach and supervise residents, medical students, and physician assistants in training and provide in-service training for counselors and social workers on various topics.

Administrative Experience

Participate in administrative and medical staff meetings. During rotations they assume responsibilities for the program's function in collaboration with Program Directors.

Principal Goal of Training Program

Make the PGY 5 competent in identifying and treating substance abuse disorders.

Faculty

John Osei-Tutu, MD, Director Chemical Dependence Service/Addiction Psychiatry Residency; Jeffrey Levine, MD, Chairman Department of Psychiatry; Ofelia Villar, MD, Chief OPD Chemical Dependence Rehabilitation; Ali Khadivi, PhD, Chief Psychologist, Department of Psychiatry; Andreas Evdokas, PhD, Psychologist, Administrative Director Adult Psychiatry Methadone Maintenance; Ferdinand Banez, MD, Physician In Charge Inpatient Rehabilitation; Eliseo Go, MD, Medical Director Methadone Maintenance; Francis Hayden, MD, Program Director Child and Adolescent Psychiatry; Barbara Kistenmacher, MD, Director Substance Abuse Treatment; and M. Fagbemi, MD Chief Inpatient Detoxification Unit.

Distinctive Aspects of Program

Bronx Lebanon has comprehensive chemical dependence service including inpatient detox and rehabilitation; methadone maintenance, 2 Halfway houses, and adolescent addiction program

Current Salary (or range): \$64,442

INSTITUTION: Boston University Medical Center
ADDRESS: Veterans Administration Outpatient Clinic
251 Causeway Street
Boston, MA 02114

Program Director: John A. Renner, Jr., MD **Phone:** (617) 248-1022
Fax: (617) 248-1496

Program Contact: Maria Nunez **Phone:** (617) 638-8549
Maria@bu.edu

MEDICAL SCHOOL AFFILIATION

Boston University School of Medicine, Boston, MA

Number of psychiatrist positions available 2006: 2 **Number enrolled at present:** 2
Duration of fellowship: 1 year, 2 years, and 1 or 2 years

Clinical Experiences and Rotations

Core clinical experience and base for longitudinal training is the Substance Abuse Treatment Program based at VA outpatient clinic. Consistent with our belief that long-term outpatient care is critical element in successful treatment of substance abuse. It is fully integrated into the VA mental health program and closely linked to primary care services.

Research Experience

PGY5 residents rotate through Boston University Addiction Medication Development Unit which has had extensive experience in Phase 1 studies and Phase 2 and 3 clinical trials of pharmacotherapy of addiction.

Teaching Activities

Addiction psychiatry residents co-lead seminars with senior faculty and conduct training seminars for junior residents. Journal Club is organized and run by the residents, utilizing faculty and guest as discussants.

Administrative Experience

Principal Goal of Training Program

Program is designed as a comprehensive training experience that will meet the requirements for eligibility for the certification examination for added qualifications in addiction psychiatry.

Faculty

John A. Renner, MD; Domenic A. Ciraulo, MD; Ofra Sarid-Segal, MD; Alan Wartenberg, MD; Maryam Afshar, MD; Nitigna Desai, MD, David Curtiss, MD; James Evans, MD; James Chengillis, MD; James Uhl, MD; Michael Mufson, MD

Distinctive Aspects of Program

Major focus on long-term outpatient treatment of patients with SUD's and co-occurring psychiatric disorders, including patients on methadone and buprenorphine.

MEDICAL SCHOOL AFFILIATION

Emory University School of Medicine, Atlanta, GA

Number of psychiatrist positions available 2006: 2 **Number enrolled at present:**

Duration of fellowship: 1 or 2 years

Clinical Experiences and Rotations

6 months in VA Substance Abuse Treatment Program treating over 1,500 veterans yearly with addictions in nicotine, cocaine, alcohol, cannabis, opioid, benzodiazepine and other dependence. One-third of patients have co-occurring mental disorders; post-traumatic stress, mood, psychotic disorders. Residents receive supervised training in medical management of intensive outpatient rehabilitation, opioid agonist therapy, and consultation-liaison, participate in a full-time 3-month rotation at Grady Memorial between Methadone, Adolescent, and Infectious Disease Clinics, 3 months rotating through private, non-profit free standing programs, including specific programs for men, women, pregnant women, adolescents and impaired professionals.

Research Experience

Residents participate in didactics lectures, develop a presentation on a topic of interest, and have the option to participate in a research track with 6-months of funded, supervised drug addiction research.

Teaching Activities

Residents have the opportunity to provide clinical supervision for PGY-2 psychiatry residents and to provide didactic lectures to medical students rotating through psychiatry.

Administrative Experience

Residents participate in staff meetings, and some have elected to participate in the Emory Faculty Staff Assistance Program Advisory Committee.

Principal Goal of Training Program

Graduates will be well-versed in the full spectrum of addictive disorders and their treatment.

Faculty

Mark D. Ackerman, PhD; Peter Ash, MD; Navjyot Bedi, MD; J. Douglas Bremner, MD; Jennifer Casarella, MD; Claire D. Coles, PhD; Marietta Collins, PhD; Karen Drexler, MD; Glenn Egan, PhD; Susan Glover, MD; John B. Griffin, MD; Leonard Howell, PhD; Stephen Holtzman, PhD; Nadine Kaslow, PhD; Clinton Kilts, PhD; Michael Kuhar, PhD; Brent Morgan, MD; Jean Muench, PhD; James Ritchie, PhD; Sanjay Sharma, MD; Claire Sterk, PhD; Neil Whicker, MD

Distinctive Aspects of Program

Residents rotate through a variety of settings from the Atlanta VAMC to community mental health private practice, have over 60 hours of didactic presentations from faculty, an optional 18-month research track, and opportunity to work with impaired professionals.

MEDICAL SCHOOL AFFILIATION

University of South Florida College of Medicine, Tampa, FL

Number of psychiatrist positions available 2006: **Number enrolled at present:** 1
Duration of fellowship: 1 year

Clinical Experiences and Rotations

Comprehensive clinical experience with substance use and psychiatric disorders exposure, formal curriculum, outpatient and residential settings supervision, consultation-liaison, and clinical research. Advanced training in knowledge, skills, clinical judgment, and attitudes to practice addiction psychiatry. Rotations: Addiction Psychiatry Residential, Dual Diagnosis and Partial Hospitalization; Consultation-Liaison to ambulatory care and inpatient services; inpatient detoxification; methadone/suboxone clinic, Academy for Adolescents and therapeutic community at PAR; Substance Abuse Outpatient Clinic.

Research Experience

Research opportunities available and encouraged. Areas of interest include genetics of alcoholism and drugs of abuse, treatment of dual diagnosed patients, and pharmacotherapeutic studies.

Teaching Activities

Teach medical students and junior general psychiatry residents in Alcohol and Drug Abuse Treatment Program. Work with and informally teach medical colleagues, nurses, addiction counselors and other hospital staff.

Administrative Experience

Works with physician(s) who handles administrative needs of program; attend weekly staff meeting to discuss administrative and quality improvement issues which are used to educate the resident on the above.

Principal Goal of Training Program

Prepares residents to understand patients and families from biological, psychological, behavioral and socio-cultural perspectives; become familiar with psychopathology, including neurological and other organic disorders, and spectrum of DSM-IV Axis I and II disorders; work as part of multidisciplinary treatment team and achieve competence in wide range of treatment modalities including crisis intervention, consultation-liaison and detoxification; risks and benefits of psychotropic medications, and use in patient populations; psychotherapy techniques. We consider residency a major part of lifelong process of education and encourage participation in journal clubs, grand rounds, and conferences to prepare for career in addiction psychiatry.

Faculty

Elie Francis, MD; Cheryl Gonzales-Nolas, MD; Woodburne Levy, MD; Teresita Sanjurjo, MD; Maria Catalano, DO; Glenn Catalano, MD; Michael Sheehan, MD; Martha Brown, MD; Ronald Girona, PhD; Sue Shealy, PhD

Distinctive Aspects of Program

Specialized dual diagnosis treatment program and clinic for treatment of impaired professionals. Experience in working with patients who have substance abuse and chronic pain. Superlative weather and beautiful beaches.

MEDICAL SCHOOL AFFILIATION

University of Maryland School of Medicine, Baltimore, MD

Number of psychiatrist positions available 2006: 4 **Number enrolled at present:** 3

Duration of fellowship: 1 or 2 years

Clinical Experiences and Rotations

Clinical training is provided through a wide range of rotations covering all relevant clinical diagnoses, age groups, patient subpopulations, treatment modalities, and drugs of abuse.

Research Experience

Residents complete academic project during training. Journal Club focusing on classic and new-emerging research in addictions where residents review and evaluate articles. Optional PGY 6 year focusing largely on research is available to interested residents.

Teaching Activities

Supervise medical students during consultation-liaison rotation, as well as student training psychiatry interviewing. Didactic lectures to residents and training other staff.

Administrative Experience

Residents work with administrative supervisors in learning to lead programs with interdisciplinary clinical teams and participate in performance improvement activities.

Principal Goal of Training Program

Provide a high level of clinical and research training in addiction psychiatry, designed to give residents knowledge and skill-base for competent practice of all aspects of addiction psychiatry, and provide a solid foundation for certification by the ABPN.

Faculty

Joseph Liberto, MD; Devang Gandhi, MD; Jerome Jaffe, MD; Christopher Welsh, MD; Eric Weintraub, MD, David McDuff, MD; Donald Thompson, MD, Paul Kulpinsky, MD

Distinctive Aspects of Program

One of the first programs accredited by ACGME: strong clinically oriented training, highly experienced faculty committed to training.

MEDICAL SCHOOL AFFILIATION

University of Minnesota Medical School, Minneapolis, MN

Number of psychiatrist positions available 2006: 2 **Number enrolled at present:** 3

Duration of fellowship: 1 year (Addiction Psychiatry); 2 years (Addiction Medicine)

Clinical Experiences and Rotations

Psychiatry residents rotate at University, VA, and Hazelden for adolescent exposure. Addiction medicine residents rotate at VA; University; and Hazelden. Populations are mixed gender adolescent and adults with primary and dual disorders. Specialty clinics focus on complicated Axis 1-3 co-morbid diagnoses, treatment models are multi-modal.

Research Experience

Fellows may assist faculty who are engaged in part-time clinical research.

Teaching Activities

Fellows are expected to provide lectures in basic addiction diagnosis and treatment to medical students and PGY 1-2 residents in psychiatry. Present a formal VA grand rounds addiction topic.

Administrative Experience

Observe MD administrators in action and assist in program development, refinement and implementation for clinical service delivery. JCAHO site visit preparation and accreditation occur routinely. Principles of managed care for ASAM level guidelines are presented.

Principal Goal of Training Program

Train physicians and psychiatrists to identify and manage addictive disorders across entire health care spectrum; develop competencies in consultation/liaison to other health care professionals, work in multidisciplinary teams and become recognized leaders with expertise in clinical practice, education and research, graduates expected to complete ASAM or ABPN addiction certification.

Faculty

Joseph Westermeyer, MD; Sheila Specker, MD; Ellen Buchanan, MD; Scott McNairy, MD; Zaheer Aslam, MD; Gihan Yoon, MD; Kathleen Heaney, MD; Sonja Yovtcheva, MD

Distinctive Aspects of Program

Clinical supervision focuses on patient good and emphasizes use of good clinical judgment, discernment in treatment planning and patient care. Workshop in Motivational Interviewing, didactic seminar series including field trips to community addiction services and toxicology lab.

Current Salary (or range): \$49,000

INSTITUTION: University of New Mexico School of Medicine

MEDICAL SCHOOL AFFILIATION

University of New Mexico School of Medicine, Albuquerque, NM

Number of psychiatrist positions available 2006: 1 **Number enrolled at present:** 1

Duration of fellowship: 1 year or 1 or 2 years (optional research year)

Clinical Experiences and Rotations

Rotations: outpatient treatment included opioid replacement therapy, ambulatory detoxification; and dual diagnosis; inpatient consultation; residential addiction treatment and medical inpatient units consultation; HIV treatment; visits to rural addiction treatment programs.

Research Experience

PGY5 fellows develop a research project with faculty mentors who are available from Psychiatry Department and UNM Center on Alcoholism, Substance Abuse, and Addiction. Project may consist of add-on to an ongoing research project, a small independent project, or a literature review resulting in article submitted for publication in a peer-review journal.

Teaching Activities

Supervise residents and medical students; review cases with staff and residents; and participate in case presentations; presentations may also be made to treatment program staff.

Administrative Experience

Fellows participate as ASAP Quality Assure Committee members, and complete a quality improvement project; and in development activities at rural treatment programs.

Principal Goal of Training Program

Additional addiction training to psychiatry residents who completed residency. Fellows completing 1 year fellowship develop clinical skills, judgment, demeanor and professional ethics to provide high quality patient care. Program serves as resource to state in management of addiction problems and serves a role in education of medical and health care students and physicians concerning mental health care of the addiction patient.

Faculty

Michael Boegenschutz, MD; Patrick Abbott, MD; Cindy Geppert, MD, PhD; Florian Birkmayer, MD; Vincent Tuason, MD; Virginia Waldorf, PhD; Lisa Arciniega, PhD; , Scott Tonigan, PhD.

Distinctive Aspects of Program

Well-rounded clinical experience, opportunities in rural addiction psychiatry, treatment of minority and underserved populations; patient-oriented addiction research with PGY 6 option.
